READ THIS FIRST

These instructions are intended for qualified technical personnel. Prior commencing with any activities...

- you must carefully read and understand this manual and
- you must follow the instructions given therein.

The EPOS4 Disk 60/8 positioning controllers are considered as partly completed machinery according to EU Directive 2006/42/EC, Article 2, Clause (g) and are intended to be incorporated into or assembled with other machinery or other partly completed machinery or equipment.

Therefore, you must not put the device into service,...

- unless you have made completely sure that the other machinery fully complies with the EU directive's requirements!
- unless the other machinery fulfills all relevant health and safety aspects!
- unless all respective interfaces have been established and fulfill the herein stated requirements!

1 ABOUT

1.1 About this Document

1.1.1 Intended Purpose

Use the document to...
–stay safe,
–be fast,
–end up with set up and ready-to-go equipment.

The purpose of the present document is to familiarize you with the EPOS4 Disk 60/8 positioning controller. It will highlight the tasks for safe and adequate installation and/or commissioning. Follow the described instructions ...

- to avoid dangerous situations,
- to keep installation and/or commissioning time at a minimum,
- to increase reliability and service life of the described equipment.

The present document is part of a documentation set and contains performance data and specifications, information on fulfilled standards, details on connections and pin assignment, and wiring examples. The below overview shows the documentation hierarchy and the interrelationship of its individual parts:

Figure 1-1 Documentation structure

1.1.2 Target Audience

The present document is intended for trained and skilled personnel. It conveys information on how to understand and fulfill the respective work and duties.

1.1.3 How to use

Throughout the document, the following notations and codes will be used.

Notation	Meaning
(n)	refers to an item (such as part numbers, list items, etc.)
→	denotes “see”, “see also”, “take note of” or “go to”

Table 1-1 Notation used

1.1.4 Symbols & Signs

In the course of the present document, the following symbols and signs will be used.

Type	Symbol	Meaning	
Safety alert	 (typical)	DANGER	Indicates an imminent hazardous situation . If not avoided, it will result in death or serious injury .
		WARNING	Indicates a potential hazardous situation . If not avoided, it can result in death or serious injury .
		CAUTION	Indicates a probable hazardous situation or calls the attention to unsafe practices. If not avoided, it may result in injury .
Prohibited action	 (typical)	Indicates a dangerous action. Hence, you must not!	
Mandatory action	 (typical)	Indicates a mandatory action. Hence, you must!	
Information		Requirement / Note / Remark	Indicates an activity you must perform prior continuing, or gives information on a particular item you need to observe.
		Best practice	Indicates an advice or recommendation on the easiest and best way to further proceed.
		Material Damage	Indicates information particular to possible damage of the equipment.

Table 1-2 Symbols and signs

1.1.5 Trademarks and Brand Names

For easier legibility, registered brand names are listed below and will not be further tagged with their respective trademark. It must be understood that the brands (the list below is not necessarily concluding) are protected by copyright and/or other intellectual property rights even if their legal trademarks are omitted in the later course of this document.

Brand Name	Trademark Owner
Adobe® Reader®	© Adobe Systems Incorporated, USA-San Jose, CA
CANopen® CiA®	© CiA CAN in Automation e.V, DE-Nuremberg
EnDat	© DR. JOHANNES HEIDENHAIN GmbH, DE-Traunreut
EtherCAT®	© EtherCAT Technology Group, DE-Nuremberg, licensed by Beckhoff Automation GmbH, DE-Verl
ix Industrial®	© HARTING AG & Co. KG, DE-Espelkamp
Linux®	© Linus Torvalds (The Linux Foundation, USA-San Francisco CA)
Micro-Fit™ Micro-Lock™	© Molex, USA-Lisle, IL
Windows®	© Microsoft Corporation, USA-Redmond, WA

1.2 About the Device

Capabilities of the device, included features, and supported motors.

maxon's EPOS4 Disk 60/8 is a round-sized, full digital, smart positioning control unit with a center hole for cable feed-trough. Its high power density allows flexible use for brushed DC and brushless EC (BLDC) motors up to approximately 480 Watts with various feedback options, such as Hall sensors, incremental encoders as well as absolute sensors in a multitude of drive applications.

The device provides motor and sensor connections on one side and power, communication, and I/O connections on the other side. The center hole provides room for the implementation of power and communication lines.

The EPOS4 Disk 60/8 is specially designed to be commanded and controlled as a slave node in a CANopen or an EtherCAT network. In addition, it can be operated via any USB communication port of a Windows or Linux workstation.

Latest technology, such as field-oriented control (FOC), acceleration/velocity feed forward, or dual loop, in combination with highest control cycle rates allow sophisticated, ease-of-use motion control.

The device is available in the following versions:

- EPOS4 Disk 60/8 CAN (688770)
- EPOS4 Disk 60/8 EtherCAT (688772)

For easier legibility, in the later course of this document naming of components will be as follows:

Short form	Meaning
Disk	any type of EPOS4 Disk 60/8 version
Disk CAN	EPOS4 Disk 60/8 CAN
Disk EtherCAT	EPOS4 Disk 60/8 EtherCAT
EPOS4	all controller versions (Module and Compact) as well as other EPOS4 positioning controllers as a whole

Table 1-4 Abbreviations

Find the latest edition of the present document as well as additional documentation and software for EPOS4 positioning controllers also on the Internet: →<http://epos.maxongroup.com>

In addition, you may wish to browse the EPOS video library. It features video tutorials that provide easy to follow instructions on how to get started with «EPOS Studio» and shows you tips and tricks on how to setup communication interfaces, and so on. Explore on Vimeo: →<https://vimeo.com/album/4646388>

1.3 About the Safety Precautions

Keep in mind:
Safety first!
Always!

- Make sure that you have read and understood the note “READ THIS FIRST” on page A-2!
- Do not engage with any work unless you possess the stated skills (→chapter “1.1.2 Target Audience” on page 1-5)!
- Refer to →chapter “1.1.4 Symbols & Signs” on page 1-6 to understand the subsequently used indicators!
- You must observe any regulation applicable in the country and/or at the site of implementation with regard to health and safety/accident prevention and/or environmental protection!

DANGER

High voltage and/or electrical shock

Touching live wires causes death or serious injuries!

- Consider any power cable as connected to live power, unless having proven the opposite!
- Make sure that neither end of cable is connected to live power!
- Make sure that power source cannot be engaged while work is in process!
- Obey lock-out/tag-out procedures!
- Make sure to securely lock any power engaging equipment against unintentional engagement and tag it with your name!

Requirements

- Make sure that all associated devices and components are installed according to local regulations.
- Be aware that, by principle, an electronic apparatus cannot be considered fail-safe. Therefore, you must make sure that any machine/apparatus has been fitted with independent monitoring and safety equipment. If the machine/apparatus should break down, if it is operated incorrectly, if the control unit breaks down or if the cables break or get disconnected, etc., the complete drive system must return – and be kept – in a safe operating mode.
- Be aware that you are not entitled to perform any repair on components supplied by maxon.

Electrostatic sensitive device (ESD)

- Wear working cloth and use equipment in compliance with ESD protective measures.
- Handle device with extra care.

••page intentionally left blank••

2 SPECIFICATIONS

2.1 Technical Data

EPOS4 Disk 60/8 CAN (688770) EPOS4 Disk 60/8 EtherCAT (688772)		
Electrical Rating	Nominal power supply voltage $+V_{CC}$ [a]	12...60 VDC
	Nominal logic supply voltage $+V_C$	12...60 VDC
	Absolute supply voltage $+V_{min}$ / $+V_{max}$	10 VDC / 61 VDC
	Output voltage (max.)	$0.9 \times +V_{CC}$
	Output current I_{cont} / I_{max} (<10 s)	8 A / 24 A
	Pulse Width Modulation frequency	50 kHz
	Sampling rate PI current controller	25 kHz (40 μ s)
	Sampling rate PI speed controller	2.5 kHz (400 μ s)
	Sampling rate PID positioning controller	2.5 kHz (400 μ s)
	Sampling rate analog input	2.5 kHz (400 μ s)
	Max. efficiency	98% (\rightarrow Figure 2-3)
	Max. speed EC motor (block)	100'000 rpm (1 pole pair)
	Max. speed EC motor (sinusoidal)	50'000 rpm (1 pole pair)
	Built-in motor choke	—
Inputs & Outputs	Digital Input 1 (general purpose) Digital Input 2 (general purpose) Digital Input 3 (general purpose) Digital Input 4 (general purpose)	Logic: +2.1...+36 VDC
	Digital Output 1 (general purpose) Digital Output 2 (general purpose)	max. 36 VDC / $I_L \leq 500$ mA (open drain with internal pull-up)
	High-Speed Digital Output 2 (Holding Brake only)	configurable, max. $+V_{CC}$ [a] / $I_L \leq 700$ mA (PWM frequency 25 kHz)
	Analog Input 1 Analog Input 2	Resolution 12-bit, -10...+10 V, 10 kHz, differential
	Analog Output 1	Resolution 12-bit, -4...+4 V, 25 kHz, referenced to GND
	Digital Hall sensor signals H1, H2, H3	+2.0...+24 VDC (internal pull-up)
	Digital incremental encoder signals A, A\, B, B\, I, I\	EIA RS422, max. 6.25 MHz

Continued on next page.

EPOS4 Disk 60/8 CAN (688770) EPOS4 Disk 60/8 EtherCAT (688772)				
Inputs & Outputs (continued)	Sensor signals (choice between multiple functions)		EIA RS422, 0.4...2 MHz, configurable EIA RS422, max. 6.25 MHz	
	<ul style="list-style-type: none"> • SSI absolute encoder signals • High-speed digital input 4 and High-speed digital output 1 			
Voltage Outputs	Sensor supply voltage V_{Sensor}		+5 VDC / $I_L \leq 100$ mA	
	Auxiliary output voltage V_{Aux}		+5 VDC / $I_L \leq 145$ mA	
Motor Connections	DC motor		+ Motor, – Motor	
	EC motor		Motor winding 1, Motor winding 2, Motor winding 3	
Interfaces			Disk CAN	Disk EtherCAT
	USB 2.0 / USB 3.0		Full Speed	Full Speed
	CAN		max. 1 Mbit/s	—
	EtherCAT		—	Full duplex (100 Mbit/s) as to IEEE 802.3 100 Base T
Status Indicators			Disk CAN	Disk EtherCAT
	Device status		Operation (green) Error (red)	Operation (green) Error (red)
	NET Status		—	RUN state (green) Error (red)
	NET Port		—	Link activity (green)
Physical			Disk CAN	Disk EtherCAT
	Weight		approx. 24 g	approx. 26 g
	Dimensions (D outside/center hole x H)		Ø60/14 x 22 mm	
	Mounting		4 mounting holes for M2 screws	
Environment	Temperature	Operation	–30...+45 °C	–30...+35 °C
		Extended range [b]	+45...+75 °C; Derating: –0.267 A/°C (→Figure 2-2)	+35...+65 °C; Derating: –0.267 A/°C (→Figure 2-2)
		Storage	–40...+85 °C	
	Altitude [c]	Operation	0...6'000 m MSL	
		Extended range [b]	6'000...10'000 m MSL Derating →Figure 2-2	
	Humidity		5...90% (condensation not permitted)	

[a] Minimal power supply voltage $+V_{\text{CC}}$ must be equal or greater than the required holding brake supply voltage.

[b] Operation within the extended range is permitted. However, a respective derating (declination of output current I_{cont}) as to the stated values will apply.

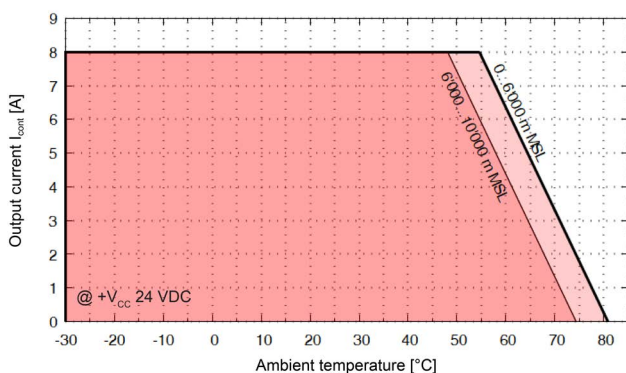

[c] Operating altitude in meters above Mean Sea Level, MSL.

2.5 Standards

The device described was successfully tested in the following setup for compliance with the standards listed below: EPOS4 Disk 60/8 EtherCAT (688772) integrated into maxon's Robot Joint 60.

In practical terms, only the complete system (the fully operational equipment comprising all individual components, such as motor, servo controller, power supply unit, EMC filter, cabling etc.) can undergo an EMC test to ensure interference-free operation.

Important Notice

The device's compliance with the mentioned standards does not imply its compliance within the final, ready to operate setup. In order to achieve compliance of your operational system, you must perform EMC testing of the involved equipment as a whole.

Electromagnetic Compatibility		
Generic	IEC/EN 61000-6-2	Immunity for industrial environments
	IEC/EN 61000-6-3	Emission standard for residential, commercial and light-industrial environments
Applied	IEC/EN 55032 (CISPR32)	Radio disturbance characteristics / radio interference
	IEC/EN 61000-4-2	Electrostatic discharge immunity test 8 kV/4 kV
	IEC/EN 61000-4-3	Radiated, radio-frequency, electromagnetic field immunity test >10 V/m
	IEC/EN 61000-4-4	Electrical fast transient/burst immunity test ±2 kV
	IEC/EN 61000-4-6	Immunity to conducted disturbances, induced by radio-frequency fields 10 V _{rms}
	IEC/EN 61000-4-8	Power frequency magnetic field 30 A/m

Others		
Environment	IEC/EN 60068-2-6	Environmental testing – Test Fc: Vibration (sinusoidal, 10...500 Hz, 20 m/s ²)
	MIL-STD-810F	Random transport (10...500 Hz up to 2.53 g _{rms})
Safety	UL File Number	Unassembled printed circuit board: E229342
Reliability	MIL-HDBK-217F	Reliability prediction of electronic equipment Environment: Ground, benign (GB) Ambient temperature: 298 K (25 °C) Component stress: In accordance with circuit diagram and nominal power Mean Time Between Failures (MTBF) • Disk CAN: 395'482 hours • Disk EtherCAT: 277'794 hours

Table 2-7 Standards

3 SETUP

IMPORTANT NOTICE: PREREQUISITES FOR PERMISSION TO COMMENCE INSTALLATION

The EPOS4 Disk 60/8 positioning controllers are considered as partly completed machinery according to EU Directive 2006/42/EC, Article 2, Clause (g) and **are intended to be incorporated into or assembled with other machinery or other partly completed machinery or equipment.**

WARNING

Risk of injury

Operating the device without the full compliance of the surrounding system with the EU Directive 2006/42/EC may cause serious injuries!

- Do not operate the device, unless you have made completely sure that the other machinery fully complies with the EU directive's requirements!
- Do not operate the device, unless the other machinery fulfills all relevant health and safety aspects!
- Do not operate the device, unless all respective interfaces have been established and fulfill the requirements stated in this document!

3.1 Generally applicable Rules

Maximal permitted supply voltage

- Make sure that supply power is between 12...60 VDC.
- Supply voltages above 67 VDC, or wrong polarity will destroy the unit.
- Note that the necessary output current is depending on the load torque. Yet, the output current limits are as follows:
 - continuous max. 8 A
 - short-time (acceleration) max. 24 A

Hot plugging the USB interface may cause hardware damage

If the USB interface is being hot-plugged (connecting while the power supply is on), the possibly high potential differences of the two power supplies of controller and PC/Notebook can lead to damaged hardware.

- Avoid potential differences between the power supply of controller and PC/Notebook or, if possible, balance them.
- Insert the USB connector first, then switch on the power supply of the controller.

Hot plugging/hot swapping the extension slots may cause hardware damage

Switch off the controller's power supply before removing or inserting an extension card.

3.2 Cabling

PLUG&PLAY

Take advantage of maxon's prefab cable assemblies. They come as ready-to-use parts and will help to reduce commissioning time to a minimum.

- a) Check the following table and find the part number of the cable assembly that matches the setup you will be using.
- b) Follow the cross-reference to get the cable's pin assignment.

Connector	Prefab Cable Assembly		
	Designation	Part Number	→Page
X1/X2	Power & Motor Cable	696283	3-40
X3	Power & Motor Cable	696283	3-40
X4	Hall Sensor Cable	696284	3-40
X5	Encoder Cable	696285	3-41
X6	Sensor Cable 3x2core	696286	3-41
X7	Signal Cable 8core	696287	3-41
X8	Signal Cable 7core	696288	3-42

X14	CAN-CAN Cable	710931	3-42
X15	CAN-COM Cable	710932	3-43
X14	EtherCAT-EtherCAT Cable	710933	3-43
X15	EtherCAT-COM Cable	710934	3-44
X16	Brake Cable	710928	3-44

Table 3-8 Prefab maxon cables

MAKE&BAKE YOUR OWN

If you decide not to employ maxon's prefab cable assemblies, you might wish to use the prepackaged kit. It contains the connectors required to make up your own cabling (**connectors for CAN/EtherCAT communication not included**, for details see →Table 3-43 and →Table 3-46).

And you also can make use of matching plugs to connect to your network bus (→Table 3-10).

EPOS4 Disk Connector Set (710926)

Table 3-11 Recommended tools

3.3 Connections

The actual connection will depend on the overall configuration of your drive system and the type of motor you will be using.

For each connector you will find detailed information on the pin assignment, the available accessories and prefab cable assemblies, the requirements that must be met, if any, and the circuitry.

Figure 3-6 EPOS4 Disk 60/8 CAN – Connectors

Figure 3-7 EPOS4 Disk 60/8 EtherCAT – Connectors

3.3.1 Power & Logic Supply (X1/X2)

Basically, any power supply may be used provided that it meets the stated minimum requirements. A separately sourced logic supply is optional.

Danger of confusion

Note that **both connectors X1/X2 (Power & Logic Supply) and X3 (Motor) are of identical type. Make sure not to interchange them.**

Best practice

Keep the motor mechanically disconnected during the setup and adjustment phase.

Figure 3-8 Power and logic supply combo connector X1/X2

X1/X2 Pin	Signal	Description
1	GND	Ground
2	+V _{CC}	Power supply voltage (+12...+60 VDC)
3	+V _C	Logic supply voltage (+12...+60 VDC)

Suitable plug	Housing	Molex Micro-Fit (0436450300)
	Contact	Molex Micro-Fit (0430300038)

Table 3-13 Power and logic supply combo connector X1/X2 – Specifications

Continued on next page.

Power supply requirements	
Output voltage	+V _{CC} 12...60 VDC
Absolute output voltage	min. 10 VDC; max. 61 VDC
Output current	Depending on load <ul style="list-style-type: none"> • continuous max. 8 A • short-time (acceleration, <10 s) max. 24 A

Table 3-14 Power supply requirements

Logic supply requirements (optional)	
Output voltage	+V _C 12...60 VDC
Absolute output voltage	min. 10 VDC; max. 61 VDC
Min output power	P _C min. 3.5 W

Table 3-15 Logic supply requirements

- 1) Use the following formula to calculate the required voltage under load.
- 2) Choose a power supply according to the calculated voltage. Thereby consider:
 - a) During braking of the load, the power supply must be capable of buffering the recovered kinetic energy (for example, in a capacitor).
 - b) If you are using an electronically stabilized power supply, make sure that the overcurrent protection circuit is configured inoperative within the operating range.
 - c) The maximal power supply voltage +V_{CC} must be equal or greater than the holding brake supply voltage.

The formula already takes the following into account:

- Maximum PWM duty cycle of 90%
- Controller's max. voltage drop of 1 V @ 8 A

KNOWN VALUES:

- Operating torque M [mNm]
- Operating speed n [rpm]
- Nominal motor voltage U_N [Volt]
- Motor no-load speed at U_N; n_O [rpm]
- Speed/torque gradient of the motor Δn/ΔM [rpm/mNm]

SOUGHT VALUE:

- Supply voltage +V_{CC} [Volt]

SOLUTION:

$$V_{CC} \geq \left[\frac{U_N}{n_O} \cdot \left(n + \frac{\Delta n}{\Delta M} \cdot M \right) \cdot \frac{1}{0.9} \right] + 1 [V]$$

3.3.2 Motor (X3)

The controller is set to drive either a maxon DC motor (brushed DC motor) or maxon EC motor (BLDC, brushless DC motor).

Danger of confusion

Note that **both connectors X3 (Motor) and X1/X2 (Power & Logic Supply) are of identical type. Make sure not to interchange them.**

Max. input voltage	+24 VDC
Logic 0	typically <0.8 V
Logic 1	typically >2.0 V
Internal pull-up resistor	2.7 k Ω (referenced to +5.45 V - 0.6 V)

Table 3-21 Hall sensor specification

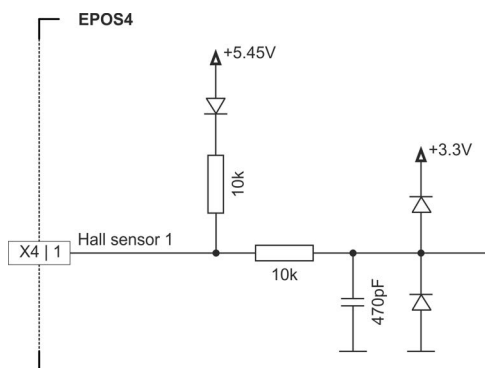

Figure 3-11 Hall sensor 1 input circuit (analogously valid for Hall sensors 2 & 3)

3.3.4 Encoder (X5)

Best practice

- *Differential signals offer good resistance against electrical interference. Therefore, **we recommend using a differential scheme**. Nevertheless, the controller supports both schemes – differential and single-ended (unsymmetrical).*
- *For best performance, **we strongly recommend to use encoders with a line driver**. Otherwise, limitations may apply due to slow switching edges.*
- *Even though 2-channel will do, **we strongly recommend to use only 3-channel versions**.*

Encoder (single-ended)		
Sensor supply voltage (V_{Sensor})	+5 VDC	
Max. auxiliary supply current	≤ 70 mA	
Input voltage	0...5 VDC	
Max. input voltage	± 12 VDC	
Logic 0	< 1.0 V	
Logic 1	> 2.4 V	
Input high current	typically +250 μ A @ +5 VDC	
Input low current	typically -330 μ A @ 0 VDC	
Max. input frequency	Push-pull	6.25 MHz
	Open collector	40 kHz (internal pull-up only) 150 kHz (additional external 3k3 pull-up)

Table 3-25 Single-ended encoder specification

Figure 3-14 Encoder input circuit Ch A "single-ended" (analogously valid for Ch B & Ch I)

3.3.5 SSI (X6)

You may connect both incremental and serial encoders as additional sensors.

Check on the applied sensor's data sheet

If the specified inrush current or the maximum continuous current of the sensor should exceed 145 mA, you can connect the sensor supply voltage (V_{Sensor}) in parallel to the auxiliary output voltage (V_{Aux}).

Figure 3-15 Sensor connector X6

Analog output 1	
Output voltage	±4 VDC
D/A converter	12-bit
Resolution	2.42 mV
Refresh rate	2.5 kHz
Analog bandwidth of output amplifier	25 kHz
Max. capacitive load	300 nF <i>Note: The increase rate is limited in proportion to the capacitive load (e.g. 5 V/ms @ 300 nF)</i>
Max. output current limit	1 mA

Table 3-38 Analog output specification

Figure 3-25 AnOUT1 circuit

3.3.8 USB (X13)

Hot plugging the USB interface may cause hardware damage

If the USB interface is being hot-plugged (connecting while the power supply is on), the possibly high potential differences of the two power supplies of controller and PC/Notebook can lead to damaged hardware.

- Avoid potential differences between the power supply of controller and PC/Notebook or, if possible, balance them.
- Insert the USB connector first, then switch on the power supply of the controller.

Figure 3-26 USB connector X13

X13 Pin	PC's USB Terminal Pin	Signal	Description
1	1	V _{Bus}	USB bus supply voltage input +5 VDC
2	2	USB_D-	USB Data- (twisted pair with Data+)
3	3	USB_D+	USB Data+ (twisted pair with Data-)
4	4	GND	USB ground

Suitable plugs	maxon (751388) (→ Table 3-10) or HARTING (09 45 181 9002 XL) or Hirose (IX31G-B-10S-CV(7.0))

Table 3-43 CAN 1 connector X14 / CAN 2 connector X15 – Specifications

Continued on next page.

CAN interface	
Standard	ISO 11898-2:2003
Max. bit rate	1 Mbit/s
Max. number of CAN nodes	127/31 (via software/hardware setting)
Protocol	CiA 301 version 4.2.0
Node-ID setting	By DIP switch or software

Table 3-44 CAN interface specification

**Note**

- Consider the CAN master's maximal bit rate.
- The standard bit rate setting (factory setting) is 1 Mbit/s, automatic bit rate detection is set.
- Use 120 Ω termination resistor at both ends of the CAN bus.
- For detailed CAN information see separate document →«EPOS4 Communication Guide».

3.3.10 EtherCAT IN (X14) & EtherCAT OUT (X15)

The Disk EtherCAT features two NET connectors for EtherCAT. One serves for NET input, the other for NET output. Both sockets are identical in respect to their external wiring.

Wrong plugging may cause hardware damage

Even though both NET sockets are prepared for identical external wiring, make sure to always connect them as follows.

- Use IN (X14) as «Input».
- Use OUT (X15) as «Output».

For detailed information see separate document →«EPOS4 Communication Guide».

Figure 3-28 EtherCAT IN connector X14 / EtherCAT OUT connector X15

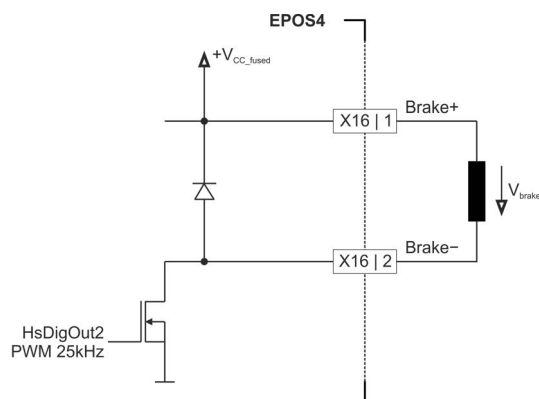

Figure 3-30 HsDigOut 2 (Holding Brake only) circuit

3.4 Prefab Cable Assemblies

Best practice

The actual connections you will need to establish depend on the overall configuration of your drive system, the type of controller, and the type of motor you will be using. Check on →chapter “4 Wiring” on page 4-51 for the prefab cable assemblies you will actually require in your setup.

3.5 DIP Switch Configuration (SW1)

Figure 3-31 DIP switch SW1 and solder pads – Location

3.5.1 CAN ID (Node-ID) / DEV ID

The device's identification (subsequently called "ID") is set by means of DIP switches 1...4 and, additionally, by shortening the solder pads JP301 and JP302. The ID (1...63) may be coded using binary code.

Setting the ID by DIP switch SW1 and solder pads JP301, JP 302

- By setting the DIP switch (1...4) address 0 ("OFF"), the ID may be set by software (object 0x2000 «Node-ID», range 1...127).
- The ID results in the summed values of DIP switch addresses 1 ("ON") and shorted solder pads JP301 and JP 302.
- DIP switches 5 and 6 do not have any impact on the ID.

Setting	Switch	Binary Code	Valence
<p>(factory setting)*</p>	1	2^0	1
	2	2^1	2
	3	2^2	4
	4	2^3	8
	JP301 closed	2^4	16
	JP302 closed	2^5	32

* the default setting for the solder pads JP301, JP302 is "open"

Table 3-62 DIP switch SW1 – Binary code values

Continued on next page.

The set ID can be observed by adding the valence of all activated switches. Use the following table as a (non-concluding) guide:

Setting	Switch				Solder pad		ID
	1	2	3	4	JP301	JP302	
 ON OFF	0	0	0	0	0	0	–
 ON OFF	1	0	0	0	0	0	1
 ON OFF	0	1	0	0	0	0	2
 ON OFF	0	0	1	0	0	0	4
 ON OFF	1	0	1	0	0	0	5
 ON OFF	0	0	0	1	0	0	8
 ON OFF JP301 closed	0	0	0	0	1	0	16
 ON OFF JP302 closed	0	1	1	1	0	1	30
 ON OFF JP301 closed JP302 closed	0	1	1	0	1	1	54
 ON OFF JP301 closed JP302 closed	1	1	1	1	1	1	63
0 = Switch "OFF" / solder pad "open" 1 = Switch "ON" / solder pad "shorted"							

Table 3-63 DIP switch SW1 – Examples

Switch	OFF	ON
5	 <p>Automatic bit rate detection deactivated (factory setting, default 1 Mbit/s)</p>	 <p>Automatic bit rate detection activated</p>

Table 3-64 DIP switch SW1 – CAN automatic bit rate detection

3.5.3 CAN Bus Termination

Switch	OFF	ON
6	 <p>Without bus termination (factory setting)</p>	 <p>Bus termination with 120 Ω</p>

Table 3-65 DIP switch SW1 – CAN bus termination

3.6 Status Indicators

The EPOS4 features three sets of LED indicators to display the device condition.

- A NET Status;** the LEDs display communication RUN states and errors conditions
- B Device Status;** the LEDs display the device's operation status and error conditions
- C NET Port;** the LED displays the NET link activity

For detailed information see separate document → «EPOS4 Firmware Specification».

Figure 3-32 LEDs – Location

3.6.1 NET Status

The LEDs (→ Figure 3-32; **A**) display the actual status and possible errors of the EPOS4 in respect to the NET network:

- Green LED shows the RUN state
- Red LED indicates errors

LED		Description
Green	Red	
OFF	—	EPOS4 is in state INIT
Blink	—	EPOS4 is in state PRE-OPERATIONAL
Single flash	—	EPOS4 is in state SAFE-OPERATIONAL
ON	—	EPOS4 is in state OPERATIONAL
Flicker	—	EPOS4 is in state BOOTSTRAP
—	OFF	EPOS4 is in operating condition
—	Double flash	An application watchdog timeout has occurred <i>Example: Timeout of Sync Manager Watchdog</i>
—	Single flash	EPOS4 has changed the COM state due to an internal error <i>Example: Change of state “Op” to “SafeOpError” due to Sync Error</i>
—	Blink	General Configuration Error <i>Example: State change commanded by master is not possible due to actual settings (register, object, hardware configuration)</i>
Blink = continuous blinking (≈2.5 Hz) Flash = flashing (≈0.2 s), followed by pause of 1 s Flicker = continuous flickering (≈10 Hz)		

Table 3-66 NET Status LEDs

3.6.2 Device Status

The LEDs (→ Figure 3-32; **B**) display the actual status and possible errors of the EPOS4:

- Green LED shows the status
- Red LED indicates errors

LED		Description
Green	Red	
Slow	OFF	Power stage is disabled. The EPOS4 is in status... • “Switch ON Disabled” • “Ready to Switch ON” • “Switched ON”
ON	OFF	Power stage is enabled. The EPOS4 is in status... • “Operation Enable” • “Quick Stop Active”
OFF	ON	FAULT state. The EPOS4 is in status... • “Fault”
ON	ON	Power stage is enabled. The EPOS4 is in temporary status... • “Fault Reaction Active”
Flash	ON	No valid firmware or firmware download in progress
Flash = flashing (≈0.9 s OFF/≈0.1 s ON) Slow = slow blinking (≈1 Hz)		

Table 3-67 Device Status LEDs

3.6.3 NET Port

The LED (→Figure 3-32; **C**) displays the link activity of the NET port (applies for both ports, X14 “IN” and X15 “OUT”):

- Green LED indicates link activity

LED Green	Description
OFF	Port is closed
Flicker	Port is open / activity is present
ON	Port is open
—	Data rate is 100 Mbit/s
Flicker = continuous flickering (≈10 Hz)	

Table 3-68 NET Port LED

4 WIRING

In this section you will find the wiring information for the setup you are using. You can either use the consolidated wiring diagrams (→Figure 4-34 and Figure 4-35) featuring the full scope of interconnectivity and pin assignment. Or you may wish to use the connection overviews for either DC motor or EC (BLDC) motor that will assist you in determining the wiring for your particular motor type and the appropriate feedback signals.

Figure 4-33 Interfaces – Designations and location

Signs and abbreviations used

The subsequent diagrams feature these signs and abbreviations:

- «EC Motor» stands for brushless EC motor (BLDC).
-  Ground safety earth connection (optional).

4.1 Possible Combinations to connect a Motor

The following tables show feasible ways on how to connect the motor with its respective feedback signals or possible combinations thereof. To find the wiring that best suits your setup, proceed as follows:

- 1) Decide on the type of motor you are using; either DC or EC (BLDC) motor.
- 2) Connect the power supply and the logic supply by following the link to the stated figure.
- 3) Check-out the listing for the combination that best suits your setup. Pick the wiring method # and go to the respective table; for DC motor → Table 4-69, for EC (BLDC) motor → Table 4-70.
- 4) Pick the row with the corresponding wiring method # and follow the link (or links) to the stated figure(s) to find the relevant wiring information.

4.1.1 DC Motor
